Poor mental health in AEC

- The **state of well-being** in which an individual realizes his or her own potential, can cope with normal stress of life, can work productively and fruitfully.
- significant problem with enormous social and economic effects
- Australian businesses were **losing $10.9 billion annually** for neglecting to address mental health in the workplace.
- Why AEC?

MENTAL HEALTH IN THE CONSTRUCTION INDUSTRY

In the past year, **1 in 5** construction workers have been impacted by bullying in the workplace

Over half of workers have suffered from a mental health issue

Only **1 in 5** said there was sufficient support from employers for mental health

SIGNS OF POOR MENTAL HEALTH

3 in 10 suffered signs of **depression**

1 in 3 suffered from **stress**

Almost **1 in 4** suffered signs of **burnout**

Almost **1 in 3** suffered from **anxiety**

Source: Herts Tools Co

PM Practitioners during COVID 19

- Many PM-practitioners in AEC suffered from poor mental health due to **complexity and dynamism** of project management roles.

- **Psychosocial risks**: aspects of work organisation, design and management that have capacity to harm on health.

- COVID-19 : **new psychosocial risks** causing poor mental health among PM-practitioners in AEC sectors

Urgent need for organizations to intervene

- **Organizational Intervention**: organisational practices developed to reduce poor mental health

- A return of **$2.30 for every $1** invested in initiatives that foster better mental health in the workplace.

- In the construction industry, the return is even higher – and average of **$2.50 for every $1** invested.

- How? Limited studies

Research Problem and Questions

Research Problem

How to improve PM practitioners' mental health in the Australian AEC sectors during COVID-19

Research Questions

RQ1: What are the COVID-19 related psychosocial risk factors causing poor mental health among PM-practitioners in AEC projects?

RQ2: What are the COVID-19 related organizational preventions for improving mental health among PM-practitioners in AEC projects?

RQ3: How do COVID-19 related psychosocial risk factors and COVID-19 related organizational preventions impact mental health in combination?

Research Aim and Objectives

Research Aim

Improve mental health status of PM practitioners in AEC sectors during COVID-19.

Research Objectives

RObj1: To explore COVID-19 related psychosocial risk factors causing poor mental health of PM-practitioners in AEC projects.

RObj2: To evaluate organisational interventions for mental health of PM-practitioners in AEC projects.

RObj3: To establish psychosocial management framework for mental health of PMPs in AEC projects.

Key Literature – COVID-19 Psychosocial Risks

No	COVID-19 Psychosocial Risks	References
1	Unsafe project environment	(Ho et al. 2020; Xiang et al. 2020)
2	Challenges due to working from home.	(Alsharef et al. 2021; Ho et al. 2020; Xiang et al. 2020)
3	Overwhelmed by managing different projects.	(Kniffin et al. 2021; Ramarajan and Reid 2013; Sonta 2020)
4	Lack of leadership knowledge and skills.	(Dirani et al. 2020; Stiles et al. 2021)
5	Lack of access to additional tools and equipment.	(Alsharef et al. 2021; CDCgov 2020)
6	Disruption to supply chain	(Alsharef et al. 2021; Raoufi and Fayek 2021; Sonta 2020)
7	Social isolation.	(Brooks et al. 2018; Tavares 2017; World Health Organization and International Labour Organisation Office 2021)
8	Difficulty in balancing personal and work needs	(Hamouche 2020; Pirzadeh and Lingard 2021; van der Molen et al. 2018)
9	Lack of training to learn various communication tools	(CDCgov 2020; van der Molen et al. 2018)
10	Difficulty in adjusting to new work schedules	(Pamidimukkala and Kermanshachi 2021)

Key Literature – COVID-19 Psychosocial Risks

No	COVID-19 Psychosocial Risks	References
11	Fear to catch corona virus.	(International Labour Organisation Office 2020)
12	Difficulty in collaborating with project team members	(Koch and Schermuly 2021)
13	Difficulty in managing project stakeholders	(Koch and Schermuly 2021; Sonta 2020)
14	Difficulty in managing project resources.	(Koch and Schermuly 2021; Sonta 2020)
15	Fears of losing job	(Brooks et al. 2018; Tavares 2017; World Health Organization and International Labour Organisation Office 2021)
16	Difficulty in managing project time	(Koch and Schermuly 2021; Sonta 2020)
17	Difficulty in managing project cost	(Koch and Schermuly 2021; Sonta 2020)
18	Difficulty in managing project contracts	(Koch and Schermuly 2021; Sonta 2020)
19	Change in project delivery methodology	(Kniffin et al. 2021; Ramarajan and Reid 2013; Sonta 2020)

Key Literature – Organisational interventions

WESTERN SYDNEY
UNIVERSITY

No	Organisational interventions	References
1	Providing support for working remotely	(Hamouche 2020; Kniffin et al. 2021; Pamidimukkala and Kermanshachi 2021)
2	Providing flexible work schedules.	(Alsharef et al. 2021; Pamidimukkala and Kermanshachi 2021; World Health Organization and International Labour Organisation Office 2021)
3	Providing training on how to detect and manage stress.	(Deloite 2020)
4	Providing training on how to enhance use of technologies for project delivery	(Firm 2021; Raoufi and Fayek 2021)
5	Establishing a system to maintain effective communication.	(Safapour et al. 2020)
6	Providing routine COVID-19 screening.	(McKinsey & Company 2020; Stiles et al. 2021)
7	Regularly disinfecting the project workplace.	(McKinsey & Company 2020; World Health Organization and International Labour Organisation Office 2021)
8	Enforcing the use of personal protective equipment.	(World Health Organization and International Labour Organisation Office 2021)
9	Providing additional childcare supports.	(McKinsey & Company 2020)
10	Providing training on how to balance work and family.	(Alsharef et al. 2021; Kniffin et al. 2021)

Key Literature – Organisational interventions

| No	Organisational interventions	References
11	Providing unlimited access to self-care apps.	(Deloite 2020; McKinsey & Company 2020)
12	Hiring additional PM practitioners to distribute project workload	(Deloite 2020)
13	Offering specific pandemic-related leaves.	(McKinsey & Company 2020)
14	Providing Employee Assistance Program.	(McKinsey & Company 2020)
15	Providing additional technical facilities for virtual and remote work	(Kniffin et al. 2021)
16	Encouraging the sharing of ideas and suggestions to improve project delivery.	(Koch and Schermuly 2021)
17	Encouraging the adoption of non-traditional project delivery methodologies.	(Koch and Schermuly 2021)
18	Taking additional measures to manage the supply chain of materials.	(Sharma et al. 2016; Stephany et al. 2020)
19	Managing and maintaining collaboration between PM practitioners and stakeholders	(Koch and Schermuly 2021)
20	Providing additional PM training.	(Pamidimukkala and Kermanshachi 2021)

Job Demand-Resources (JD-R) Model/Theory

- One of the most prominent **occupational stress models /**theories for occupational health and safety.

  ✓ **Job strain** is a response to **imbalance** between **job demands** on the individual and the **job resources** he or she has to deal with those demands.

  ✓ job resources may **buffer** the effect of job demands on job strain

  ✓ lack of job resources to balance job demands is the **predictors** of poor mental health

- Drawing on the JDR theory, **organisational interventions** can balance the effect of **COVID-19 psychosocial risks** on **work stress**

Theoretical framework

PROJECT AND PROGRAM MANAGEMENT SYMPOSIUM
• Better Management • Better Projects
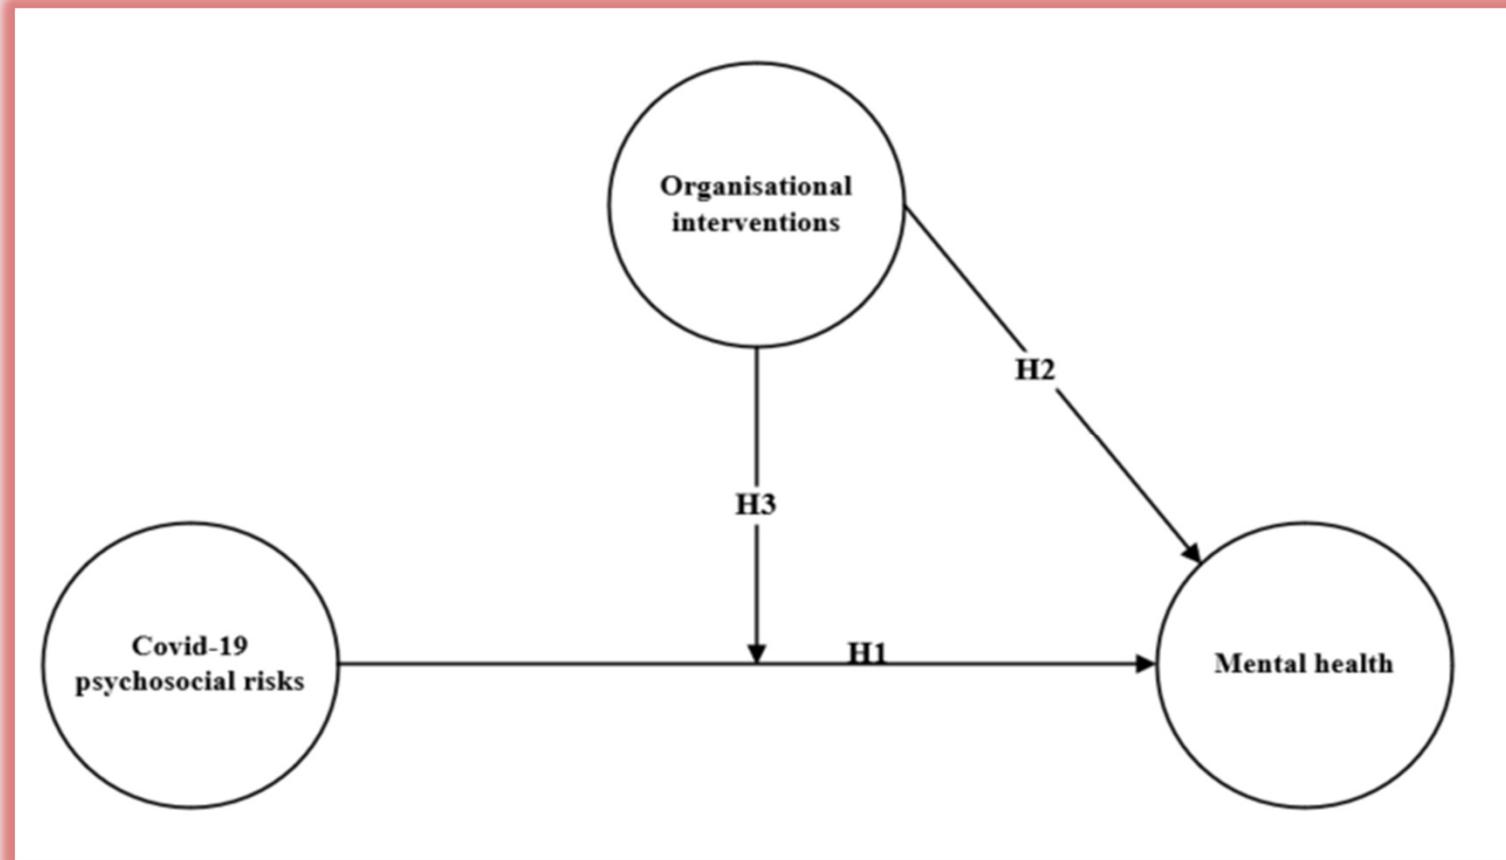

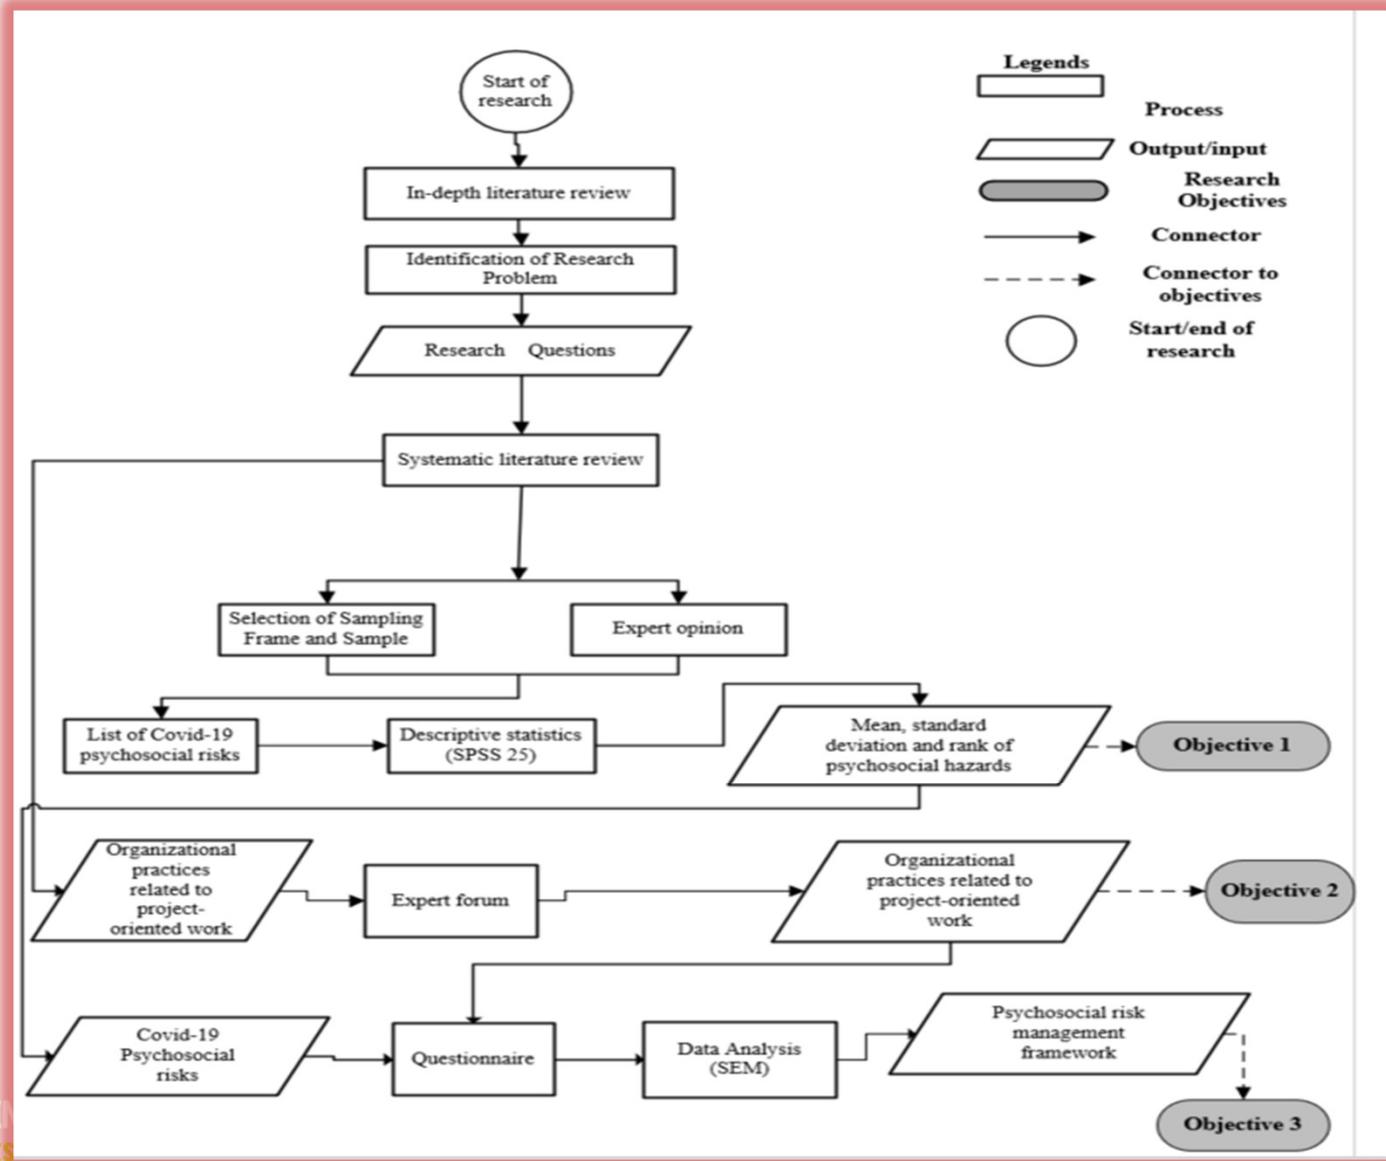

Research Design

Research Design - Perceived Stress Scale (PSS)

- Absence of work stress considered as good mental health (Leung. 2007; Love, 2010)

- Prof Sheldon Cohen

Professor of Psychology at Carnegie Mellon University.

Director of the Laboratory for the Study of Stress, Immunity and Disease

- PSS

The most widely used psychological instrument for measuring the perception of stress. (e.g. Remor, 2006; Smith et al. 2014; Cohen,1994 and Roberti et al. 2011)

Improving the Mental Health of Project Management Practitioners (PMPs)
in Architecture, Engineering and Construction (AEC) Projects during COVID-19 Pandemic

Research Survey

Researchers from Western Sydney University need your input to improve the mental health of project management practitioners. Objectives include exploring psychosocial risk factors, evaluating management strategies and establishing a psychosocial management framework. Click below to learn more about this important research and participate in the short survey. As featured on the ICCPM Research Support Program.

Australian Research Project

Posted on May 9, 2022 by Pat Weaver | Leave a comment

A research project funded by the PGCS needs your input:

"Mental Health of Project Management (PM) Practitioners in Architecture, Engineering and Construction (AEC) Sector during COVID-19 Pandemic"

If your work is PM-oriented in the Architecture, Engineering and Construction (AEC) sector, you are cordially invited to participate in this online questionnaire survey by reflecting on your own PM-oriented work experience during the CoVID-19 pandemic. This survey is anonymous and will take you about 15 minutes.

About the Project:
Unprecedented changes due to COVID-19 pandemic have introduced new psychosocial risks for mental health of project management (PM) practitioners in the architecture, engineering and construction (AEC) sector. This research is aimed at improving mental health status of PM practitioners in the AEC sector during COVID-19 pandemic by evaluating psychosocial risk factors and their interventions, thereby establishing a mental health management framework, which is expected to help improve mental health status of PM practitioners in AEC sector.

Project Team:
This study is sponsored by the Project Governance and Controls Symposium (PGSC) , Australia , and has been approved by the Western Sydney University Human Research Ethics Committee (Approval Number: H14637). The research team includes Assoc Prof Xiaohua Jin, Dr Robert Osei-Kyei, Prof Srinath Perera, and Mr Bashir Tijani from Western Sydney University and Mr James Bawtree from PMLogic.

Structural Equational Modelling (SEM)

- SEM has the potential to estimate multiple and interdependent relationships, presentation of **latent constructs** in interdependent relationships, and account for **measurement error** in the estimation process (DiLalla et al. 2000)

- In this research, SEM was applied to examine the interactive relationships between COVID-19 related psychosocial risk, organisational interventions and mental health.

- SEM is classified into two types: covariance-based (CB-SEM) and partial least-squares (PLS-SEM).

- In this research, PLS-SEM was considered appropriate than CB-SEM because it is suitable for non-distribution data and smaller sample size (Hair et al. 2016).

- SEM is evaluated in two stages: measurement model and structural model.

SEM - Measurement model – PM Work Stress

Construct	Code	Measurement items	Loading
PM Work Stress Cronbach's alpha **0.804** Composite reliability **0.593** Average variance extracted **0.699**	STRE 1	How often have you been upset	0.784
	STRE 2	How often have you felt that you were unable to control the important things	0.959
	STRE 3	How often have you felt nervous and "stressed"	0.923
	STRE 4	How often have you felt confident about your ability to handle the problems.	0.677
	STRE 5	How often have you felt that things in your PM-oriented work were going your way.	0.860
	STRE 6	How often have you found that you could not cope with all the things.	0.836
	STRE 7	How often have you been able to control irritations.	0.742
	STRE 8	How often have you felt that you were on top of things.	0.834
	STRE 9	How often have you been angered because of things.	0.792
	STRE 10	How often have you felt difficulties in your PM-oriented work.	0.913

Hypotheses	Path coefficient	P-values	Hypotheses validation	F square
H1: COVID-19 psychosocial risk negatively impact mental health	-0.536	0.005	Supported	0.870
H2: Organisational interventions positively impact mental health	0.347	0.000	Supported	0.311
H3: Organisational interventions moderate the effect of COVID-19 psychosocial risk on mental health	-0.130	0.165	Not supported	0.086

Hypotheses

Predictive Power

Constructs	SSO	SSE	Q^2 (=1-SSE/SSO)
COVID-19 psychosocial risk	1102.000	1000.000	0.090
Mental health	580.000	305.248	0.474
Organisational interventions	1160.000	1100.000	0.052

Major Findings

- The mental health of PM-practitioners in had been compromised across AEC sectors during Covid-19

- 19 significant COVID-19 psychosocial risks causing poor mental health among PM-practitioners in AEC sectors were confirmed.

- 20 organizational interventions for improving mental health of PM-practitioners in AEC sectors were established.

- In general, there are no significant differences in the above constructs among AEC sectors during Covid-19

Major Findings

top 5 **psychosocial risks** during COVID

1. Unsafe project environment (CORISK 1)
2. Difficulty in collaborating with project team members (CORISK 12)
3. Fears of losing job (CORISK 15)
4. Lack of leadership knowledge and skills (CORISK 4)
5. Difficulty in adjusting to new work schedules (CORISK 10)

top 5 **organizational interventions** during COVID

- Providing flexible work schedules. (COOPM 2)
- Providing support for working remotely (COOPM 1)
- Managing and maintaining collaboration between PM practitioners and stakeholders (COOPM 19)
- Providing additional technical facilities for virtual and remote work (COOPM 15)
- Establishing a system to maintain effective communication. (COOPM 5)

Major Findings

- COVID-19 psychosocial risks had played a major role in causing poor mental health of PM-practitioners in the AEC sectors.

- Organisational interventions had buffered the negative impact of COVID-19 psychosocial risks by improving the mental health of PM-practitioners in AEC sectors.

- There was no clear evidence to confirm that organisational interventions had moderated the impact of COVID-19 psychosocial risks on mental health of PM-practitioners in the AEC sectors.
